**Bulk Finds:** None Pottery Bone Lithics Shell Charcoal Marble CBM Other (please note):  
 (tick)

**Small Finds:** (list, noting: Bag #, Type, Material)  
 #6: porcelain (modern) #19-21: chipped stone  
 #7: glazed sherd (Cottman period) #22: bone tool  
 #8: flint #23-24: chipped stone  
 #11: ground stone #26-27: chipped stone  
 #14: chipped stone #33-34: chipped stone

**Samples:** (list, noting: Sample #, Type, Volume)

Deposit Sieved: YES  NO  % Sieved:

**Discussion:** Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?

• After the excavating machine removed <sup>most of</sup> top soil, we cleaned the loose soil of the surface. Areas of pinkish white natural soil appeared. Also several refusal pits (?) with undefined borders - need further exploring. Concentration of large stones on the western side. Possible human bones.

• Extension (SE): on 17/07/23 we extended the trench on the ~~SE~~ <sup>south wall on the eastern side.</sup> to explore limits of the pit with pottery. It was discovered that the archaeology level started 37cm deep. The top soil included a large CBM with imprints. After cleaning the surface <sup>of the original trench in front of the extension</sup>, a white layer of natural soil with postholes that formed a circular shape came up.
