Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context? C904 is the area/soil underneath the CBM structure that is supposed to be an oven. The soil is fine and easy to be remove but surrounded by very hard and compact CBM. Contains some pottery, shells and bones and lithics
