Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?									
Removal of the top layer by the machine. The layer was disturbed and the soil was fine, sandy silty light brown. Big quantity of material, especially pottery. During the removal, at the NE corner, a whitish clayish soil was uncovered with a high concentration of CBM Special findings from lab: strainer. and perforated sherd possibly from bowl
