<p><b>Discussion:</b> Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?</p> <p>C909 is the interior side of the building - possible house. It contains lots of pottery and some bones, CBM and shells. Most of pottery comes from LN II with lots of black on red decoration. Soil was <del>relatively</del> compact but <del>relatively</del> easy to remove and it came out in lumps. On the SE side there is a small circular area that contains high concentration of pottery laid flat that we suspect it's the bottom of the building.</p>
