**Discussion:** *Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?*

C913 is the floor of the suspected C903 oven\*. Due to constant exposure to fire, the ~~red~~ clay building material had the same texture, <sup>shape</sup> and weight as slag. The maximum width of the floor is 1.5 cm. The placement of the "slag" <sup>\*\*</sup> around the main structure suggests that there could be 2 different phases of the oven. In addition the foundation cut (C910) cut the oven structure before the building of the house. Part of the ~~red~~ floor was disturbed by animals but it seems to expand further at the W.

\*It is <sup>a</sup> thin, irregular whitish layer of clay. <sup>\*\*</sup> Both on the floor and higher...
