Small Finds: (list, noting: Bag #, Type, Material)

Samples: (list, noting: Sample #, Type, Volume)

Floation #1

Deposit Sieved: YES/NO

% Sieved: 100%

Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?

C642 is a layer below C636. there isn't any finds, and the soil is compound. It could be the layer between archaeology (C636) and natural (C644), so it's soil is mixed.

And it was also truncated by to cut, which is C639 (with cut 640) and C643 (with cut C645).

Excavate about 10cm then the soil become pale and without any artifact which may be the natural soil (C644).

Time Period (include rationale):
